Dear Proshanta,

We just spoke.

1. Create an account at <https://github.com/>. Send me your user id. Download the GitHub for Windows (I assume you are on Windows) from <https://windows.github.com/>
2. Recalculate the second column as the "Number of reviews owned by this person whose 'Status' field in Review table is "merged".
3. Generate a developer review discussion network (DRDN) in Pajek format whose vertices are developers (each developer is uniquely identified by a PersonID). Two developers are connected by an edge if both have commented on at least one review. The weight of the edge is the number of reviews both have commented on.

Regards,

Subhajit
